

Berlin Eldercare

AI Adoption Opportunity

Prepared for Cleo

CEO, Berlin Eldercare Company

Market signal & the data that matters

The real problem — why now

The recommendation: Voize

ROI, timeline & next steps

June 2026

**Nursing/residential Care AI adoption
grew only from 3.1% to 4.5% (U.S) in
2025**

Opportunity signals

**€ 3.38B of €5B
deployed**

German AI strategy budget already
deployed

Source: OECD, 2025

1,100+

German care facilities
already live on AI documentation

70%

Government target for AI
documentation adoption by 2028

**€12,000 federal digitisation subsidy available per facility
(§8 SGB XI, open through 2030)**

Source: AOK / vdek, 2024

Germany cannot hire its way out of this.

STAFFING CRISIS

300,000

nurse shortfall projected by 2030

37%

rise in long-term care demand by 2055

1 in 5

Germans already over age 66

ADMIN BURDEN & BURNOUT

30%

of every shift spent on documentation

62%

cite admin overload as #1 cause of burnout

€23/hr

average Berlin caregiver wage — time is expensive

SEPARATING REAL FROM HYPE

Not all AI is equal. Here's how we evaluated each application.

AI Documentation (Voize)

✗ AVOID

THE RECOMMENDATION

Voize

AI Documentation for Nurses

HQ

Berlin, Germany (founded 2020)

Funding

\$50M Series A — Balderton Capital

Scale

1,100+ facilities · 75,000 nurses

Language

German-native, handles dialects

Compliance

GDPR-compliant · EU-hosted · TI-ready

Price

€12–€15 per user / month

How it works

A caregiver speaks naturally after care: Frau Schmidt, Morgenpflege abgeschlossen. Voize structures it, maps to the correct ePA fields, and files it in seconds. No keyboard. No clipboard. No end-of-shift typing.

Why not US alternatives?

Suki / Glass Health

20–30× more expensive · English-first · no TI integration

Generic AI (ChatGPT)

Not trained on nursing language · hallucination risk

Build in-house

No internal AI team needed — Voize is complete SaaS

Payback in 7 weeks. 3-year net return: +€271,600.

HOW WE CALCULATED IT

40 caregivers ×

30 min saved / shift ×

€23 / hour (Berlin wage) ×

230 working days / year =

€105,800 / year — recovered time

€21,200

Year 1 cost
(high estimate)

~7 weeks

Payback period
(high estimate)

+€271,600

3-year net return
(time savings only)

IMPLEMENTATION ROADMAP

7–8 months from decision to full deployment.

Key risk: Betriebsrat (works council) — engage in Week 3, not after contract signing. Early engagement is the single biggest risk mitigation in this plan.

THE 2-YEAR VISION

This isn't a cost. It's a platform for becoming the best place to work in Berlin eldercare.

YEAR 1 — VOIZE

- ✓ ~4,600 hours / year recovered from documentation
- ✓ €105,800 in re-deployable staff time
- ✓ Staff turnover target: 30% → ≤22%
- ✓ Voize in job postings = recruitment advantage
- ✓ Clean ePA data foundation built for Year 2
- ✓ §8 SGB XI subsidy application possible

YEAR 2 — LINDERA (FALL PREVENTION)

- ★ 27% fall reduction (400+ German facilities)
- ★ 2–4 fewer hospitalisations / year estimated
- ★ Staff turnover target: ≤22% → ≤16%
- ★ ~€230,000+ cumulative retention savings
- ★ Pflegekassen rate renegotiation backed by data
- ★ Option to expand: proven playbook in hand

LEARNINGS & HONEST REFLECTIONS

What we learned, what we'd do differently, and where the gaps are.

WHAT WE LEARNED

- ✓ German regulatory compliance (Betriebsrat, GDPR, BSI C5) must be first, not last — it's the plan
- ✓ AI adoption in nursing/residential care lags every other sector (4.5% vs 19.2% in tech) — the gap is the opportunity
- ✓ Vendor proximity matters: local language, local integration, local support makes a real difference

TECHNICAL CHALLENGES

- ✓ No internal company data was available — all projections built from sector benchmarks
- ✓ German-language market research is sparse; most healthcare AI data is US-centric
- ✓ Quantifying 'soft' ROI (staff morale, employer brand) is genuinely hard — we stayed conservative

WHAT WE'D DO DIFFERENTLY

- ✓ Start Betriebsrat engagement in the planning phase, not as a box to check
- ✓ Interview 3–5 current Voize users directly before recommending; deployment data is good but first-hand better
- ✓ Build a qualitative resident-impact measure alongside the time-savings KPI from Day 1

NEXT STEPS

Three things Cleo can do this week.

1

Book a Voize demo

Request a product demo from Voize's Berlin team. Takes 30 minutes. No commitment. This is the fastest way to test whether it resonates with your staff.

2

Check your Betriebsrat relationship

If you have 150+ employees, identify your works council contact and flag that a technology pilot is being considered. Starting this conversation early is the single biggest risk mitigation in the plan.

3

Apply for the §8 SGB XI digital subsidy

Up to €12,000 per facility is available for digital care tools. Applications are open through 2030. This can offset 50–100% of Year 1 costs. Worth 30 minutes to a lawyer or advisor.
